## Inequalities Questions for SBI PO Pre, IBPS PO Pre, SBI Clerk Mains and IBPS Clerk Mains Exams.

## Inequalities Quiz 15

Directions: In these questions, relationship between different elements is shown in the statement. The statements are followed by two or three conclusions. Choose the correct Answer given below:

1. Statements: $R>I=N>P \quad Y \geq R>K \quad N \leq E<Z$

Conclusions: $\mathrm{K}>\mathrm{I}, \quad \mathrm{I}<\mathrm{Z}$
A. Only conclusion II follows.
B. Only conclusion I follows.
C. Both conclusion I and II follow.
D. Neither conclusion I nor conclusion II follows.
E. Either conclusion I or conclusion II follows.
2. Statements: $\mathrm{T}>\mathrm{K}>\mathrm{Y}, \mathrm{J} \leq \mathrm{K}=\mathrm{G}, \quad \mathrm{I}>\mathrm{C} \geq \mathrm{G}, \mathrm{M} \leq \mathrm{I}<\mathrm{N}$ Conclusions: $\mathrm{N}>\mathrm{K}, \quad \mathrm{C} \leq \mathrm{T}, \mathrm{M}<\mathrm{J}$
A. Both conclusions II and III follow
B. Either conclusion I or III follows
C. Only conclusion I follows
D. All the conclusions follow
E. None of the conclusions follows
3. Statements: $B \geq P=M, X>B<T, Y=H \leq X, R>Y>N$

Conclusions: $P>H, \quad P=H, \quad R>X$
A. Both conclusions I and III follow
B. Either conclusion I or III follows
C. Only conclusion III follows
D. All conclusions follow
E. None of the conclusions follows
4. Statements: $\mathrm{F}<\mathrm{G}<\mathrm{D}, \mathrm{D}<\mathrm{H}>\mathrm{C}, \mathrm{F}=\mathrm{C}<\mathrm{A}$

Conclusions: $G<C, \quad H=A$
A. Both conclusions I and II follow
B. Either conclusion I or II follows
C. Only conclusion I follows
D. Only conclusion II follows
E. Neither conclusion I nor II follows
5. Statements: $\mathrm{C}<\mathrm{H}=\mathrm{J}, \quad \mathrm{X} \leq \mathrm{Y}<\mathrm{J}, \quad \mathrm{N}>\mathrm{X} \geq \mathrm{Z}$ Conclusions: $\mathrm{Y}>\mathrm{Z}, \quad \mathrm{Y}=\mathrm{Z}$
A. Both conclusions I and II follow
B. Either conclusion I or II follows
C. Only conclusion I follows
D. Only conclusion II follows
E. Neither conclusion I nor II follows
6. Statements: $\mathrm{W} \geq \mathrm{Q}>\mathrm{U}, \mathrm{T}=\mathrm{L} \geq \mathrm{Q}, \mathrm{V} \leq \mathrm{A}<\mathrm{L}$ Conclusions: $T>U, \quad W>T$
A. Both conclusions I and II follow
B. Either conclusion I or II follows
C. Only conclusion I follows
D. Only conclusion II follows
E. Only conclusion II follows
7. Statements: $F>K \geq H, G=L \geq K, V \leq B<L$

Conclusions: $\mathrm{H}>\mathrm{V}, \quad \mathrm{B}<\mathrm{F}$
A. Both conclusions I and II follow
B. Either conclusion I or II follows
C. Only conclusion I follows
D. Only conclusion II follows
E. Neither conclusion I nor II follows
8. Statements: $\mathrm{H}>\mathrm{K}=\mathrm{O}>\mathrm{R} \quad \mathrm{K} \geq \mathrm{M}>\mathrm{L} \quad \mathrm{O} \leq \mathrm{F}<\mathrm{Y}$

Conclusions: $F>R, \quad M<H$
A. Only conclusion II follows.
B. Only conclusion I follows.
C. Both conclusion I and II follow.
D. Neither conclusion I nor conclusion II follows.
E. Either conclusion I or conclusion II follows.
9. Statements: $A>B=S, \quad E \geq B>J, H<S \leq E, A>S \geq T$ Conclusions: $\mathrm{E}>\mathrm{T}, \mathrm{E}=\mathrm{T}, \mathrm{A}>\mathrm{J}$
A. None of the conclusions follow
B. Only conclusion I and either conclusion II or II follow
C. Either conclusion I or II follows
D. Only conclusion III and either conclusion I or II follow
E. All the conclusions follow
10. Statements: $T=K>L, \quad D>K>U, \quad C=Z<T, \quad F \geq V>U$ Conclusions: $\mathrm{U}<\mathrm{T}, \mathrm{F}=\mathrm{K}, \mathrm{C}<\mathrm{L}$
A. Only conclusion I follows
B. Either conclusion I or II follows
C. Only conclusions II and III follow
D. None of the conclusions follows
E. All the conclusions follow

## Correct Answers:

| $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{4}$ | $\mathbf{5}$ | $\mathbf{6}$ | $\mathbf{7}$ | $\mathbf{8}$ | $\mathbf{9}$ | $\mathbf{1 0}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A | C | E | E | B | C | E | C | D | A |

## Explanations:

1. Statements: $R>I=N>P \quad Y \geq R>K \quad N \leq E<Z$

Conclusions: $\mathrm{K}>\mathrm{I}, \quad \mathrm{I}<\mathrm{Z}$
For conclusion I: K > I
From the statements I and II, we get:
I < R > K
Here, the signs on inequalities between I and R are getting reversed. Conclusion I hence doesn't follow.
For conclusion II: I < Z
Combining statements I and III, we get:
$\mathrm{I}=\mathrm{N} \leq \mathrm{E}<\mathrm{Z}$
Here, the common sign between I and $Z$ is ' $<$ ' and the given conclusion is also $\mathrm{I}<\mathrm{Z}$. Hence, conclusion II follows.

Hence, the correct answer is would be 'Only conclusion II follows'.
2. Statements: $T>K>Y, J \leq K=G, \quad I>C \geq G, M \leq I<N$

Conclusions: $\mathrm{N}>\mathrm{K}, \mathrm{C} \leq \mathrm{T}, \mathrm{M}<\mathrm{J}$
For Conclusion I: $\mathrm{N}>\mathrm{K}$
From statements II, III and IV, we get:
$\mathrm{N}>\mathrm{I}>\mathrm{C} \geq \mathrm{G}=\mathrm{K}$
Here, the common sign between N and K is '>'. Thus $\mathrm{N}>\mathrm{K}$.
Hence conclusion I follows.

## For Conclusion II: $\mathrm{C} \leq \mathrm{T}$

From statements I, II and III, we get:
$\mathrm{C} \geq \mathrm{G}=\mathrm{K}<\mathrm{T}$
Here, we can see the opposite sign between C and T, thus no relationship can be established between them.
Hence conclusion II does not follow.

## For Conclusion III: M < J

From statements II, III and IV, we get:
$\mathrm{M} \leq \mathrm{I}>\mathrm{C} \geq \mathrm{G}=\mathrm{K} \geq \mathrm{J}$
Here, we can see the opposite sign between M and J , thus no relationship can be established between them.
Hence conclusion III does not follow.
Therefore only conclusion I follows.
Hence option C is correct.
3. Statements: $B>P=M, \quad X>B<I, \quad Y=H<X, \quad B>Y>N$

Conclusions: $\mathrm{P}>\mathrm{H}, \quad \mathrm{P}=\mathrm{H}, \quad \mathrm{R}>\mathrm{X}$
For Conclusion I: P>H
From statements I, II and III, we get:
$H \leq X>B \geq P$
Here, we can see the opposite sign between $P$ and $H$, thus no relationship can be established between them.

Hence conclusion I does not follow.
For Conclusion II: $\mathbf{P}=\mathbf{H}$
From statements I, II and III, we get:
$H \leq X>B \geq P$
Here, we can see the opposite sign between $P$ and $H$, thus no relationship can be established between them.

Hence conclusion II does not follow.

## For Conclusion III: R > X

From statements II and III, we get:
$R>Y=H \leq X$
Here, we can see the opposite sign between $R$ and $X$, thus no relationship can be established between them.
Hence conclusion III does not follow.
Therefore none of the conclusions follows.

Hence option E is correct.
4. Statements: $\mathrm{F}<\mathrm{G}<\mathrm{D}, \mathrm{D}<\mathrm{H}>\mathrm{C}, \mathrm{F}=\mathrm{C}<\mathrm{A}$

Conclusions: $\mathrm{G}<\mathrm{C}, \mathrm{H}=\mathrm{A}$
For conclusion I: G < C
From statements I and III, we get:
$\mathrm{C}=\mathrm{F}<\mathrm{G}$
Here, the common sign between $C$ and $G$ is ' $<$ '. Hence $C<G$. Thus conclusion I does not follow.
For conclusion I: $\mathrm{H}=\mathrm{A}$
From statements II and III, we get:
H $>\mathrm{C}<\mathrm{A}$
Here, we get opposite signs between H and A . Thus no relationship can be established between them.
Hence conclusion II does not follow.
Therefore neither conclusion I nor II follows.
Hence option E is correct.
5. Statements: $C<H=J, \quad X \leq Y<J, N>X \geq Z$

Conclusions: $\mathrm{Y}>\mathrm{Z}, \quad \mathrm{Y}=\mathrm{Z}$

For conclusion I: $\mathrm{Y}>\mathrm{Z}$

From statements I and III, we get:
$Y \geq X \geq Z$
Here, the common sign between $Y$ and $Z$ is ' $\geq$ '. Hence $Y \geq Z$ Thus conclusion I does not follow individually.

For conclusion II: $\mathrm{Y}=\mathrm{Z}$

From statements I and III, we get:
$Y \geq X \geq Z$
Here, the common sign between $Y$ and $Z$ is ' $\geq$ '. Hence $Y \geq Z$. Thus conclusion II also does not follow individually.
On combining conclusions I and II, we get: $Y \geq Z$, which is the true relationship.

Thus either conclusion I or II follows.
Hence option B is correct.
6. Statements: $W \geq Q>U, T=L \geq Q, V \leq A<L$

Conclusions: $\mathrm{T}>\mathrm{U}, \quad \mathrm{W}>\mathrm{T}$
For conclusion I: T>U

From statements I and II, we get:
$T=L \geq Q>U$
Here, the common sign between $T$ and $U$ is ' $>$ '. Thus $T>U$.
Hence conclusion I follows.

For conclusion II: W > T

From statements I and II, we get:
$\mathrm{W} \geq \mathrm{Q} \leq \mathrm{L}=\mathrm{T}$
Here, we can see the opposite sign between W and T, thus no relationship can be established between them.
Hence conclusion II does not follow.

Thus only conclusion I follows.
Hence option C is correct.
7. Statements: $F>K \geq H, G=L \geq K, V \leq B<L$

Conclusions: $\mathrm{H}>\mathrm{V}, \quad \mathrm{B}<\mathrm{F}$

For conclusion I: H > V

From statements I, II and III, we get:
$\mathrm{V} \leq \mathrm{B}<\mathrm{L} \geq \mathrm{K} \geq \mathrm{H}$
Here, we can see the opposite sign between H and V , thus no relationship can be established between them.

Hence conclusion I does not follow.

## For conclusion II: B < F

From statements I, II and III, we get:
B $<\mathrm{L} \geq \mathrm{K}<\mathrm{F}$
Here, we can see the opposite sign between B and F, thus no relationship can be established between them.

Hence conclusion II does not follow.
Thus neither conclusion I nor conclusion II follows.

Hence option E is correct.
8. Statements: $H>K=O>R \quad K \geq M>L \quad O \leq F<Y$

Conclusions: $\mathrm{F}>\mathrm{R}, \quad \mathrm{M}<\mathrm{H}$
For conclusion I: F > R

Combining statements I and III, we get:
$\mathrm{F} \geq \mathrm{O}>\mathrm{R}$

Here, the common sign between $F$ and $R$ is ' $>$ ' and the given conclusion is $F>R$. Hence, conclusion I follows.

## For conclusion II: M < H

Combining statements I and II, we get:
$\mathrm{H}>\mathrm{K} \geq \mathrm{M}$

Here, the common sign between H and M is ' $>$ ' and the given conclusion is $\mathrm{M}<\mathrm{H}$. Conclusion II follows.

Hence, the correct answer is would be 'Both the statements I and II follow'.
9. Statements: $A>B=S, E \geq B>J, H<S \leq E, A>S \geq T$

Conclusions: $\mathrm{E}>\mathrm{T}, \mathrm{E}=\mathrm{T}, \mathrm{A}>\mathrm{J}$
For conclusion I: E > T

From statements III and IV, we get:
$\mathrm{T} \leq \mathrm{S} \leq \mathrm{E}$
Here, common sign between T and E is ' $\leq$ '. Thus $\mathrm{T} \leq \mathrm{E}$ or $\mathrm{E} \geq \mathrm{T}$.
Also, From statements I, III and IV, we get:
$E \geq B=S \geq T$

Here, common sign between E and T is ' $\geq$ '. Thus $\mathrm{T} \leq \mathrm{E}$ or $\mathrm{E} \geq \mathrm{T}$.

Hence conclusion I does not follow individually.

## For conclusion II: E = T

From statements III and IV, we get:
$T \leq S \leq E$
Here, common sign between T and E is ' $\leq$ '. Thus $\mathrm{T} \leq \mathrm{E}$ or $\mathrm{E} \geq \mathrm{T}$.
Also, From statements I, III and IV, we get:
$E \geq B=S \geq T$
Here, common sign between E and T is ' $\geq$ '. Thus $\mathrm{T} \leq \mathrm{E}$ or $\mathrm{E} \geq \mathrm{T}$.
Hence conclusion II does not follow individually.

## For conclusion III: A > J

From statements I and II, we get:
A > B > J
Here, the common sign between $A$ and $J$ is ' $>$ '. Thus $A>J$.
Hence conclusion III follows.

## Combining conclusions I and II:

As the final conclusion is $E \geq T$, so if we combine both the conclusions I and II i.e. $E>T$ and $E=T$, we get $\mathrm{E} \geq \mathrm{T}$.

Thus either conclusion I or conclusion II follows.
Therefore, either conclusion I or II and conclusion III follow.
Hence option D is correct..
10. Statements: $T=K>L, \quad D>K>U, C=Z<T, F \geq V>U$

Conclusions: $\mathrm{U}<\mathrm{T}, \mathrm{F}=\mathrm{K}, \mathrm{C}<\mathrm{L}$
For conclusion I: U < T
From statements I and II, we get:
$\mathrm{T}=\mathrm{K}>\mathrm{U}$
Here, the common sign between T and U is ' $>$ '. Thus $\mathrm{T}>\mathrm{U}$ or $\mathrm{U}<\mathrm{T}$.

Hence conclusion I follows.
For conclusion II: F = K
From statements II and IV, we get:
$\mathrm{K}>\mathrm{U}<\mathrm{V} \leq \mathrm{F}$
Here, we can see the opposite signs between $K$ and $F$. Thus no relation can be established between them.

Hence conclusion II does not follow.

## For conclusion III: C < L

From statements I, II and III, we get:
$Z=C<T=K>L$
Here, we can see the opposite signs between C and D . Thus no relation can be established between them.
Hence conclusion III does not follow.

Therefore only conclusion I follows.
Hence option A is correct.
