## Inequalities Quiz 18

Directions: In these questions, relationship between different elements is shown in the statement. The statements are followed by some conclusions. Choose the correct answer on the basis of information given below.

1. Statements: $P<D \leq U, U=G>B, Y<G \leq L$ Conclusions: L>B, $P>Y$
A. Both conclusions I and II follow
B. Either conclusion I or II follows
C. Only conclusion I follows
D. Only conclusion II follows
E. Neither conclusion I nor II follows.
2. Statements: $X>Y \geq Z, \quad O \geq X<E, \quad R<O>K$ Conclusions: $Z<E, \quad O>Y$
A. Both conclusions I and II follow
B. Either conclusion I or II follows
C. Only conclusion I follows
D. Only conclusion II follows
E. Neither conclusion I nor II follows.
3. Statements: $\mathrm{F}<\mathrm{H}<\mathrm{E}, \mathrm{J}<\mathrm{D}>\mathrm{C}, \quad \mathrm{F}=\mathrm{C}<\mathrm{G}$

Conclusions: $\mathrm{H}<\mathrm{C}, \mathrm{D}=\mathrm{G}$
A. Both conclusions I and II follow
B. Either conclusion I or II follows
C. Only conclusion I follows
D. Only conclusion II follows
E. Neither conclusion I nor II follows
4. Statements: $\mathrm{C}<\mathrm{D}=\mathrm{A}, \mathrm{J} \leq \mathrm{G}<\mathrm{A}, \quad \mathrm{T}>\mathrm{J} \geq \mathrm{V}$

Conclusions: $\mathrm{G}>\mathrm{V}, \quad \mathrm{G}=\mathrm{V}$
A. Both conclusions I and II follow
B. Either conclusion I or II follows
C. Only conclusion I follows
D. Only conclusion II follows
E. Neither conclusion I nor II follows
5. Statements: $N \geq K>J, P=M \geq K, Q \leq L<M$

Conclusions: $\mathrm{P}>\mathrm{J}, \mathrm{N}>\mathrm{P}$
A. Both conclusions I and II follow
B. Either conclusion I or II follows
C. Only conclusion I follows
D. Only conclusion II follows
E. Neither conclusion I nor II follows
6. Statements: $M>A>R, G=R<S, F \leq R \leq C, Q=C>$ J

Conclusions: $\mathrm{M}>\mathrm{F}, \mathrm{Q}=\mathrm{F}, \mathrm{Q}>\mathrm{F}$
A. Only conclusion I follows
B. Either conclusion II or III follows
C. Only conclusion III follows
D. Both option A and B.
E. Both option A and C
7. Statements: $J=O \leq P, T>P>X, Y \leq X=W, \quad S>Y>R$

Conclusions: $T>S, \quad J<Y, \quad W>R$
A. Only conclusion I follows
B. Only conclusions II and III follow
C. Only conclusion III follows
D. All the conclusions follow
E. None of the conclusions follow
8. Statements: $B \leq A<C, M=O>A, V \geq O>I, \quad I<K=V$

Conclusions: $B<V, \quad A=K, \quad I>C$
A. Only conclusion I follows
B. Only conclusions II and III follow
C. Either conclusion I or III follows
D. All the conclusions follow
E. None of the conclusions follow
9. Statements: $Y>U=X<E, L \geq X>A=W, B<L=C<Z$

Conclusions: $B>E, U<Z, A<Y$
A. None of the conclusions follow
B. Only conclusion II follows
C. Either conclusion I or II follows
D. Only conclusions II and III follow
E. All the conclusions follow
10. Statements: $M<U \leq D<E, L \geq O>A=D, K<L=N<F$ Conclusions: $\mathrm{F}>\mathrm{E}, \mathrm{M}<\mathrm{O}, \mathrm{N} \geq \mathrm{U}$
A. None of the conclusions follow
B. Only conclusion II follows
C. Either conclusion I or II follows
D. Only conclusion III and either conclusion I or II follows
E. All the conclusions follow

## Correct Answers:

| $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{4}$ | $\mathbf{5}$ | $\mathbf{6}$ | $\mathbf{7}$ | $\mathbf{8}$ | $\mathbf{9}$ | $\mathbf{1 0}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| C | A | E | B | C | D | C | A | D | B |

## Explanations:

1. Statements: $P<D \leq U, U=G>B, Y<G \leq L$

Conclusions: L>B, $P>Y$
For conclusion I: L>B
From statements II and III, we get:
B $<\mathrm{G} \leq \mathrm{L}$
Here, the common sign between $B$ and $L$ is ' $<$ '. Hence $B<L$ or $L>B$.
Thus conclusion I follows.
For conclusion II: P > Y
From statements I, II and III, we get:
$\mathrm{Y}<\mathrm{G}=\mathrm{U} \geq \mathrm{D}>\mathrm{P}$
Here, we can see the opposite sign between $P$ and $Y$, thus no relationship can be established between them.

Hence conclusion II does not follow.
Therefore only conclusion I follows.
Hence option C is correct.
2. Statements: $X>Y \geq Z, \quad O \geq X<E, \quad R<O>$

Conclusions: $\mathrm{Z}<\mathrm{E}, \mathrm{O}>\mathrm{Y}$
For conclusion I: Z < E
From statements I and II, we get:
$E>X>Y \geq Z$
Here, the common sign between $E$ and $Z$ is ' $>$ '. Hence $Z<E$ or $E>Z$.
Thus conclusion I follows.
For conclusion II: $\mathbf{O}>\mathbf{Y}$
From statements I and II, we get:
$O \geq X>Y$
Here, the common sign between O and Y is ' $>$ '. Hence $\mathrm{O}>\mathrm{Y}$ or $\mathrm{Y}<\mathrm{O}$.

## Hence conclusion II follows.

Therefore both conclusion I and II follows.
Hence option A is correct.
3. Statements: $\mathrm{F}<\mathrm{H}<\mathrm{E}, \mathrm{J}<\mathrm{D}>\mathrm{C}, \mathrm{F}=\mathrm{C}<\mathrm{G}$

Conclusions: $\mathrm{H}<\mathrm{C}, \mathrm{D}=\mathrm{G}$
For conclusion I: H < C
From statements I and III, we get:
$\mathrm{C}=\mathrm{F}<\mathrm{H}$
Here, the common sign between C and H is ' $<$ '. Hence $\mathrm{C}<\mathrm{H}$ or $\mathrm{H}>\mathrm{C}$.
Thus conclusion I does not follow.
For conclusion II: D = G
From statements II and III, we get:
D $>\mathrm{C}<\mathrm{G}$
Here, we get opposite signs between D and G. Thus no relationship can be established between them.
Hence conclusion II does not follow.
Therefore neither conclusion I nor II follows.
Hence option E is correct.
4. Statements: $\mathrm{C}<\mathrm{D}=\mathrm{A}, \mathrm{J} \leq \mathrm{G}<\mathrm{A}, \quad \mathrm{T}>\mathrm{J} \geq \mathrm{V}$

Conclusions: $\mathrm{G}>\mathrm{V}, \quad \mathrm{G}=\mathrm{V}$
For conclusion I: G > V
From statements I and III, we get:
$\mathrm{G} \geq \mathrm{J} \geq \mathrm{V}$
Here, the common sign between $G$ and $V$ is ' $\geq$ '. Hence $G \geq V$.
Thus conclusion I does not follow individually.
For conclusion II: G = V
From statements I and III, we get:
$\mathrm{G} \geq \mathrm{J} \geq \mathrm{V}$
Here, the common sign between G and V is ' $\geq$ '. Hence $\mathrm{G} \geq \mathrm{V}$. Thus conclusion II also does not follow individually.

On combining conclusions I and II, we get: $G \geq V$, which is the true relationship.
Thus either conclusion I or II follows.
Hence option B is correct.
5. Statements: $N \geq K>J, P=M \geq K, Q \leq L<M$

Conclusions: $\mathrm{P}>\mathrm{J}, \quad \mathrm{N}>\mathrm{P}$
For conclusion I: P > J
From statements I and II, we get:
$P=M \geq K>J$
Here, the common sign between $P$ and $J$ is ' $>$ '. Thus $P>J$.

## Hence conclusion I follows.

## For conclusion II: N > P

From statements I and II, we get:
$N \geq K \leq M=P$
Here, we can see the opposite sign between N and P , thus no relationship can be established between them.

## Hence conclusion II does not follow.

Thus only conclusion I follows.
Hence option C is correct.
6. Statements: $\mathrm{M}>\mathrm{A}>\mathrm{R}, \mathrm{G}=\mathrm{R}<\mathrm{S}, \mathrm{F} \leq \mathrm{R} \leq \mathrm{C}, \mathrm{Q}=\mathrm{C}>\mathrm{J}$

Conclusions: $\mathrm{M}>\mathrm{F}, \mathrm{Q}=\mathrm{F}, \mathrm{Q}>\mathrm{F}$
For conclusion I: M > F
From statements I and II, we get:
$M>A>R \geq F$
Here, the common sign between M and F is ' $>$ '. Thus $\mathrm{M}>\mathrm{F}$.
Hence conclusion I follows.
For conclusion II: Q = F
From statements III and IV, we get:
$F \leq R \leq C=Q$
Here we can see that the common sign between $F$ and $Q$ is ' $\leq$ '. Hence $F \leq Q$.
Thus conclusion II does not follow individually.
For conclusion III: Q > F
From statements III and IV, we get:
$\mathrm{F} \leq \mathrm{R} \leq \mathrm{C}=\mathrm{Q}$
Here we can see that the common sign between $F$ and $Q$ is ' $\leq$ '. Hence $F \leq Q$.
Thus conclusion III does not follow individually.
Combining conclusions II and III, we get: F $\leq \mathrm{Q}$
Thus either conclusion II or III follows.
Therefore conclusion I and either conclusion II or III follows.
Hence option D is correct.
7. Statements: $J=O \leq P, T>P>X, Y \leq X=W, \quad S>Y>R$

Conclusions: $T>S, \quad J<Y, \quad W>R$
For conclusion I: T>S
From statements I, II and III, we get:
$T>P>X \geq Y$
Here, we can see the opposite sign between $T$ and $S$, thus no relationship can be established between them.

Hence conclusion I does not follow.
For conclusion II: J < Y
From statements I, II and III, we get:
$J=O \leq P>X \geq Y$
Here, we can see the opposite sign between J and $Y$, thus no relationship can be established between them.

Hence conclusion II does not follow.
For conclusion III: W > R
From statements III and IV, we get:
$W=X \geq Y>R$
Here we can see that the common sign between $W$ and $R$ is ' $>$ '. Hence $W>R$.
Thus conclusion III follows.
Therefore only conclusion III follows.
Hence option C is correct.
8. Statements: $\mathrm{B} \leq \mathrm{A}<\mathrm{C}, \mathrm{M}=\mathrm{O}>\mathrm{A}, \mathrm{V} \geq \mathrm{O}>\mathrm{I}, \mathrm{I}<\mathrm{K}=\mathrm{V}$

Conclusions: $\mathrm{B}<\mathrm{V}, \mathrm{A}=\mathrm{K}, \quad \mathrm{I}>\mathrm{C}$

## For conclusion I: B < V

From statements I, II and III, we get:
B $\leq \mathrm{A}<\mathrm{O} \leq \mathrm{V}$
Here, common sign between $B$ and $V$ is ' $<$ '. Thus $B<V$.
Hence conclusion I follows.

## For conclusion II: A = K

From statements I, II, III and IV, we get:
$\mathrm{K}=\mathrm{V} \geq \mathrm{O}>\mathrm{A}$
Here, the common sign between $K$ and $A$ is ' $>$ '. Thus $K>A$.
Hence conclusion II does not follow.

For conclusion III: I > C
From statements I, II and III, we get:
$\mathrm{C}>\mathrm{A}<\mathrm{O}>1$
Here we can see the opposite sign between I and C, thus no relationship can be established between them.

Thus conclusion III does not follow.
Therefore only conclusion I follows.
Hence option A is correct.
9. Statements: $Y>U=X<E, L \geq X>A=W, B<L=C<Z$

Conclusions: $\mathrm{B}>\mathrm{E}, \mathrm{U}<\mathrm{Z}, \mathrm{A}<\mathrm{Y}$
For conclusion I: B > E
From statements I, II and III, we get:
B $<\mathrm{L} \geq \mathrm{X}<\mathrm{E}$

Here, we can see the opposite sign between B and $E$, thus no relationship can be established between them.

## Hence conclusion I does not follow.

For conclusion II: U < Z
From statements I, II and III, we get:
$Z>C=L \geq X=U$

Here, common sign between $Z$ and $U$ is ' $>$ '. Thus $Z>U$ or $U<Z$.

## Hence conclusion II follows.

For conclusion III: A < Y
From statements I and II, we get:
$\mathrm{Y}>\mathrm{U}=\mathrm{X}>\mathrm{A}$

Here, common sign between $Y$ and $A$ is '>'. Thus $Y>A$ or $A<Y$.

## Hence conclusion III follows.

Therefore only conclusions II and III follow.

Hence option D is correct.
10. Statements: $M<U \leq D<E, L \geq O>A=D, K<L=N<F$

Conclusions: $\mathrm{F}>\mathrm{E}, \mathrm{M}<\mathrm{O}, \mathrm{N} \geq \mathrm{U}$

For conclusion I: F > E
From statements I, II and III, we get:
$\mathrm{E}>\mathrm{D}=\mathrm{A}<\mathrm{O} \leq \mathrm{L}<\mathrm{F}$

Here, we can see the opposite sign between E and F, thus no relationship can be established between them.

Hence conclusion I does not follow.

For conclusion II: $\mathrm{M}<\mathbf{O}$

From statements I and II, we get:
$\mathrm{M}<\mathrm{U} \leq \mathrm{D}=\mathrm{A}<\mathrm{O}$

Here, common sign between M and O is ' $<$ '. Thus $\mathrm{M}<\mathrm{O}$.
Hence conclusion II follows.

For conclusion III: $\mathbf{N} \geq \mathbf{U}$

From statements I, II and III, we get:
$N=L \geq O>A=D \geq U$
Here, common sign between $N$ and $U$ is ' $>$ '. Thus $N>U$.

Hence conclusion III does not follow.

Therefore only conclusion II follows.
Hence option B is correct.
