## Inequalities Questions for IBPS Clerk Pre, SBI Clerk Pre, IBPS PO Pre, SBI PO Pre and IBPS RRB Exams.

## Inequalities Quiz 9

Directions: In these questions, relationship between different elements is shown in the statement. The statements are followed by two conclusions. Choose the correct Answer given below:

1. Statements: $U>Y \geq W \leq K ; W=X \geq Z$

Conclusion: I. U > K, II. Z $\leq \mathrm{K}$
A. Only conclusion I follows.
B. Only conclusion II follows.
C. Either conclusion I or II follows.
D. Neither conclusion I nor II follows.
E. Both conclusion I and II follow.
2. Statements: $G \geq H>J \leq K ; M<H ; J>U$

Conclusion: I. $\mathrm{H}>\mathrm{U}$, II. $\mathrm{M}<\mathrm{G}$
A. Either conclusion I or II follows.
B. Only conclusion II follows.
C. Only conclusion I follows.
D. Both conclusion I and II follow.
E. Neither conclusion I nor II follows.
3. Statements: $\mathrm{L} \leq \mathrm{K}<\mathrm{J} \geq \mathrm{U} ; \mathrm{R} \geq \mathrm{T} \geq \mathrm{J}$

Conclusion: I.T $>\mathrm{L}, \mathrm{II} . \mathrm{U} \leq \mathrm{R}$
A. Neither conclusion I nor II follows.
B. Only conclusion I follows.
C. Only conclusion II follows.
D. Either conclusion I or II follows.
E. Both conclusion I and II follow.
4. Statements: $\mathrm{F}>\mathrm{J}=\mathrm{L}>\mathrm{Q} \quad \mathrm{W} \geq \mathrm{F}>\mathrm{H} \quad \mathrm{L} \leq \mathrm{T}<\mathrm{X}$

Conclusions: $\mathrm{H}>\mathrm{J}, \quad \mathrm{J}<\mathrm{X}$
A. Only conclusion II follows.
B. Only conclusion I follows.
C. Both conclusions I and II follow.
D. Neither conclusion I nor conclusion II follows.
E. Either conclusion I or conclusion II follows.
5. Statements: $D>B=A>T \quad B \geq N>V \quad A \leq Z<X$

Conclusions: Z > T, N < D
A. Only conclusion II follows.
B. Only conclusion I follows.
C. Both conclusions I and II follow.
D. Neither conclusion I nor conclusion II follows.
E. Either conclusion I or conclusion II follows.
6. Statements: $\mathrm{W}<\mathrm{H} \leq \mathrm{L}<\mathrm{J} \leq \mathrm{N}<\mathrm{V}, \mathrm{M}=\mathrm{F} \neq \mathrm{J}=\mathrm{G} \geq \mathrm{I}>\mathrm{Q}, \mathrm{U} \leq \mathrm{P}<\mathrm{E}=\mathrm{C}=$ I

Conclusions: I. E < V II. W < P
A. Neither C1 nor C2 follows
B. Only C1 follows
C. Both C1 and C2 follow
D. Only C2 follows
E. Either C 1 or C 2 follows
7. Statements: $A>C=B=F \geq J<M, \quad K=Q \leq J<Z<N, \quad X=U \neq K=S \geq Z>X$

Conclusions: I. Z < C II. A > K
A. Neither C1 nor C2 follows
B. Only C1 follows
C. Both C1 and C2 follow
D. Only C2 follows
E. Either C 1 or C 2 follows
8. Statements: $4=6 \neq 9<7=2 \neq 1, Y=7<3 \leq 5<0=Z$

Conclusions: I. $Z>6 \quad$ II. $0 \leq 4$
A. Neither C1 nor C2 follows
B. Only C1 follows
C. Both C1 and C2 follow
D. Only C2 follows
E. Either C1 or C2 follows
9. Statements: $2>3>4=1<5, \quad 9 \leq 7=8<4<0$

Conclusions: I. $3>7 \quad$ II. $9 \leq 1$
A. Neither C1 nor C2 follows
B. Only C1 follows
C. Both C1 and C2 follow
D. Only C2 follows
E. Either C 1 or C 2 follows
10. Statements: $\mathrm{C}<\mathrm{O} \leq \mathrm{G}=\mathrm{E} \leq \mathrm{P}<\mathrm{I}, \mathrm{J}=\mathrm{P}<\mathrm{H} \leq \mathrm{S} \leq \mathrm{V}>\mathrm{N}, \mathrm{A} \leq \mathrm{V}<\mathrm{B}=\mathrm{Z}=\mathrm{W}>\mathrm{U}$ Conclusions: I. $\mathrm{O}<\mathrm{B} \quad$ II. S > G
A. Neither C1 nor C2 follows
B. Only C1 follows
C. Both C1 and C2 follow
D. Only C2 follows
E. Either C 1 or C 2 follows

## Correct Answers:

| $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{4}$ | $\mathbf{5}$ | $\mathbf{6}$ | $\mathbf{7}$ | $\mathbf{8}$ | $\mathbf{9}$ | $\mathbf{1 0}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| B | D | E | A | C | B | D | E | B | C |

## Explanations:

1. Given statements:
$U>Y \geq W \leq K$
$W=X \geq Z$
Combining both statements, we get
$K \geq W=X \geq Z$
Check conclusion I:
From (i), we can't compare U and K because of opposite signs. Hence, conclusion I does not follow.

## Check conclusion II:

From (iii) $\mathrm{K} \geq \mathrm{W}=\mathrm{X} \geq \mathrm{Z}$
While comparing $K$ and $Z$, we get common sign of ' $\geq$ '
Then, $K \geq Z$ or $Z \leq K$ is true.
Hence, conclusion II follow.
Hence, option B is correct.

## 2. Given statements:

$\mathrm{G} \geq \mathrm{H}>\mathrm{J} \leq \mathrm{K}$
$M<H$
$J>U$

## Check conclusion I:

Combining (i) and (iii), we get
$\mathrm{G} \geq \mathrm{H}>\mathrm{J}>\mathrm{U}$ ...(iv)
While comparing $H$ and $U$, we get common sign of ' $>$ '
Then, $\mathrm{H}>\mathrm{U}$ is true.
Hence, conclusion I follows.

## Check conclusion II:

Combining (i) and (ii), we get
$\mathrm{G} \geq \mathrm{H}>\mathrm{M}$
While comparing $G$ and $M$, we get common sign of ' $>$ '
Then, $\mathrm{G}>\mathrm{M}$ or $\mathrm{M}<\mathrm{G}$ is true.
Hence, conclusion II follow.
Hence, option D is correct.

## 3. Given statements:

$\mathrm{L} \leq \mathrm{K}<\mathrm{J} \geq \mathrm{U} \quad$...(i)
$R \geq T \geq J$

## Check conclusion I:

Combining (i) and (ii), we get
$\mathrm{L} \leq \mathrm{K}<\mathrm{J} \leq \mathrm{T} \leq R$
While comparing $L$ and $T$, we get common sign of ' $<$ '
Then, $\mathrm{L}<\mathrm{T}$ or $\mathrm{T}>\mathrm{L}$ is true.
Hence, conclusion I follows.
Check conclusion II:
Combining (i) and (ii), we get
$R \geq T \geq J \geq U$
While comparing $R$ and $U$, we get common sign of ' $\geq$ '
Then, $R \geq U$ Or $U \leq R$ is true.
Hence, conclusion II follows.
Hence, option E is correct.
4. Statements: $\mathrm{F}>\mathrm{J}=\mathrm{L}>\mathrm{Q} \quad \mathrm{W} \geq \mathrm{F}>\mathrm{H} \quad \mathrm{L} \leq \mathrm{T}<\mathrm{X}$

Conclusions: H > J, J < X
For conclusion I: H > J
From the statements I and II, we get:
J < F > H
Here, the signs on inequalities between J and F are getting reversed. Conclusion I hence doesn't follow.
For conclusion II: J < X
Combining statements I and III, we get:
$J=L \leq T<X$
Here, the common sign between J and X is ' $<$ ' and the given conclusion is also $\mathrm{J}<\mathrm{X}$. Hence, conclusion II follows.
Hence, the correct answer would be 'Only conclusion II follows'.
Hence option A is correct.
5. Statements: $D>B=A>T \quad B \geq N>V \quad A \leq Z<X$

Conclusions: $Z>T, \quad N<D$
For conclusion I: Z > T
Combining statements I and III, we get:
$Z \geq A>T$
Here, the common sign between $Z$ and $T$ is ' $>$ ' and the given conclusion is $Z>T$. Hence, conclusion I follows.
For conclusion II: N < D
Combining statements I and II, we get:
D > B $\geq \mathrm{N}$
Here, the common sign between $D$ and $N$ is ' $>$ ' and the given conclusion is $N<D$. Conclusion II follows.
Hence, the correct answer would be 'Both the statements I and II follow'.
Hence option C is correct.
6. Statements: $W<H \leq L<J \leq N<V, M=F \neq J=G \geq I>Q, U \leq P<E=C=1$

Conclusions: I. E < V II. W < P
Combining the equations to find the relationship between E and V , we get
$\mathrm{E}=\mathrm{C}=\mathrm{I} \leq \mathrm{G}=\mathrm{J} \leq \mathrm{N}<\mathrm{V}$
Clearly, the common sign of inequalities between E and V is of ' $<$ '. Conclusion $\mathrm{E}<\mathrm{V}$ is hence stays true.
C1, hence, follows.
Similarly, combining equations to find the relationship between W and P , we get
$\mathrm{W}<\mathrm{H} \leq \mathrm{L}<\mathrm{J}=\mathrm{G} \geq \mathrm{I}=\mathrm{C}=\mathrm{E}>\mathrm{P}$
Clearly, the signs are getting reversed and hence we can't define a relationship between $W$ and $P$. C2, hence, doesn't follow.
Option B is hence the correct answer.
7. Statements: $A>C=B=F \geq J<M, K=Q \leq J<Z<N, \quad X=U \neq K=S \geq Z>X$

Conclusions: I. Z < C II. A > K
Combining equations to find the relationship between Z and C , we get
$Z \leq S=K=Q \leq J \leq F=B=C$
Here, the common sign of inequalities between $Z$ and $C$ is of ' $\leq$ ' and the given conclusion is $Z<C$. $C 1$, hence, doesn't follow.
Similarly, combining equations to find the relationship between $A$ and $K$, we get
$\mathrm{A}>\mathrm{C}=\mathrm{B}=\mathrm{F} \geq \mathrm{J} \geq \mathrm{Q}=\mathrm{K}$
Here, the common sign between $A$ and $K$ is of ' $>$ ' and the conclusion is $A>K$. C2, hence, follows.
Option D is hence the correct answer.
8. Statements: $4=6 \neq 9<7=2 \neq 1, \quad Y=7<3 \leq 5<0=Z$

Conclusions: I. Z>6 II. $0 \leq 4$
Combining equations to find the relationship between $Z$ and 6 , we get
$Z=0>5 \geq 3>7>9 \neq 6=4$
Clearly, we can't find a definite relationship between $Z$ and 6 .
Same goes with in case of 0 and 4 . But when observe we find that
Z = 0 and $4=5$
Therefore, in any scenario, Z or 0 must be either greater than, equal to or less than 4 or 5 .
Clearly, either C1 or C2 follows.
Option E is hence the correct answer.
9. Statements: $2>3>4=1<5, \quad 9 \leq 7=8<4<0$

Conclusions: I. $3>7 \quad$ II. $9 \leq 1$
Combining equations to find the relationship between 3 and 7 , we get
$2>3>4>8=7$
Clearly, the common sign of inequalities between 3 and 7 is of ' $>$ ' and the conclusion given is $3>7$. C1, hence, follows.
Similarly, for 9 and 1 we get,
$9 \leq 7=8<4=1$
Here, the common sign of inequalities between 9 and 1 is of ' $<$ ' whereas the conclusion given is $9 \leq 1$. C2, hence, doesn't follow.
Hence option B is the correct answer.
10. Statements: $C<O \leq G=E \leq P<I, J=P<H \leq S \leq V>N, A \leq V<B=Z=W>U$

Conclusions: $\mathrm{I} . \mathrm{O}$ < B II. S > G
Combining both the equations to find the relationship between $O$ and $B$, we get
$\mathrm{O} \leq \mathrm{G}=\mathrm{E} \leq \mathrm{P}<\mathrm{H} \leq \mathrm{S} \leq \mathrm{V}<\mathrm{B}$
Clearly, the common sign of inequalities between $O$ and $B$ is of ' $<$ ' and the given conclusion is $O<B$. $C 1$, hence, follows.
Similarly, for $S$ and $G$, we get
$S \geq H>P \geq E=G$
Clearly, the common sign between $S$ and $G$ is of ' $>$ ' and the given conclusion is $S>G$. C2, hence, follows as well. Option C is hence the correct answer.
